

# Twinspace

With the Twinspace potted plants can easily be placed apart in any preferred position making use of a simple system that can be adjusted manually. The Twinspace can be altered in height manually because of 4 separate bolts. The weight of the Twinspace is about 2,5 kilograms and it exists completely out of aluminium. It can be used with various pot sizes.

## **Advantages:**

Minimal labour required to make two lines out of one existing line. It weighs less than other existing forks and can also handle more pots at one time. Approx. 30 to 50% more.

It can easily be used to pick the pots from the conveyor belt to place them in the right location. In this way the pots will always benefit optimal from the space and light available.

## **Pot sizes:**

Depending on the size the Twinspace can handle various quantities of pots in one time. These pot sizes are: 9 cm, 10 cm, 10,5 cm, 11 cm, 12 cm, 13 cm and 14 cm. Depending on the width of your bay (greenhouse) up to a maximum of 4 extra pot holders can be mounted on the Twinspace manually.
